

HTML Images

```
<!DOCTYPE html>
<html>
<body>

<h2>HTML Image</h2>

</body>
</html>
```

HTML Images Syntax

The HTML `<img>` tag is used to embed an image in a web page.

Images are not technically inserted into a web page; images are linked to web pages. The `<img>` tag creates a holding space for the referenced image.

The `<img>` tag is empty, it contains attributes only, and does not have a closing tag.

The `<img>` tag has two required attributes:

- `src` - Specifies the path to the image
- `alt` - Specifies an alternate text for the image

Image Size - Width and Height

You can use the `style` attribute to specify the width and height of an image.

```
<!DOCTYPE html>
<html>
<body>
<h2>Image Size</h2>
```

```
<p>Here we use the style attribute to specify the width and height of an image:</p>

</body>
</html>
```

Alternatively, you can use the `width` and `height` attributes:

Example

```

```

Width and Height, or Style?

The `width`, `height`, and `style` attributes are all valid in HTML.

However, we suggest using the `style` attribute. It prevents styles sheets from changing the size of images:

Example

```
<!DOCTYPE html>
<html>
<head>
<style>
img {
  width: 100%;
}
</style>
</head>
<body>

</body>
</html>
```

Images on Another Server/Website

Some web sites point to an image on another server.

To point to an image on another server, you must specify an absolute (full) URL in the `src` attribute:

Example

```

```

Animated Images

HTML allows animated GIFs:

Example

```

```

Image as a Link

To use an image as a link, put the `<img>` tag inside the `<a>` tag:

Example

```
<a href="default.asp">  
    
</a>
```

Image Floating

Use the CSS `float` property to let the image float to the right or to the left of a text:

Example

```
<p>  
The image will float to the right of the text.</p>
```

```
<p>  
The image will float to the left of the text.</p>
```
